

A METHOD AND APPARATUS FOR A NETWORK-BASED VOICE MEMO FEATURE

ABSTRACT OF THE DISCLOSURE

[0055] This invention relates to a method and apparatus for providing a network-based voice memo feature. More particularly, the invention is directed to a system that will provide network-based functionality to allow a user to record a voice memo during an ongoing call, create a voice mail message based on the recorded memo and store the message in the users voice mail box for later retrieval. In one form, mobile subscribers are able to conveniently record short voice memos, such as those relating to directory assistance, driving directions, ... etc., while on a call and retrieve the recorded information when needed.
